OnApp for Virtual Service Providers

Sell public cloud hosting without hardware or software

With OnApp for Virtual Service Providers, you can launch your own global cloud without having to buy hardware or cloud management software. It's a 100% virtual cloud platform.

The new fast track to the cloud

Has the cost of infrastructure stopped you from launching your own cloud? As a Virtual Service Provider (VSP) you can sell global cloud capacity without owning any infrastructure.

With no CAPEX on hardware, and no software license required, becoming a VSP is a no risk way to launch your own cloud.
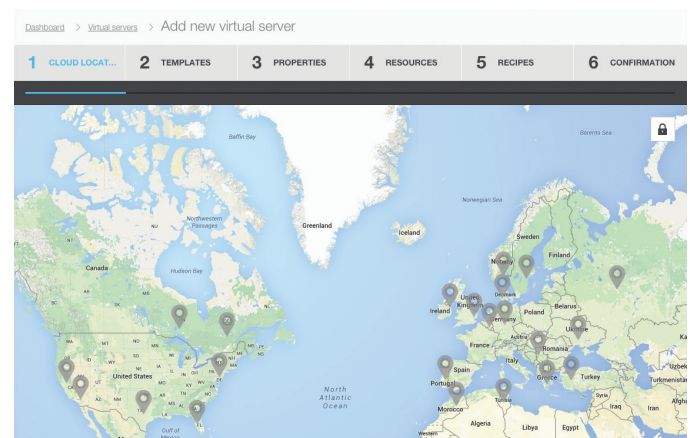

More choice, less complexity

Most cloud users host applications with several providers, not because they want to, but because they need to. They put up with the hassle of managing multiple cloud providers because it's the only way they can get access to multiple locations.

As a VSP you can take all of that hassle away, and offer a huge range of different clouds to your customers through one control panel.
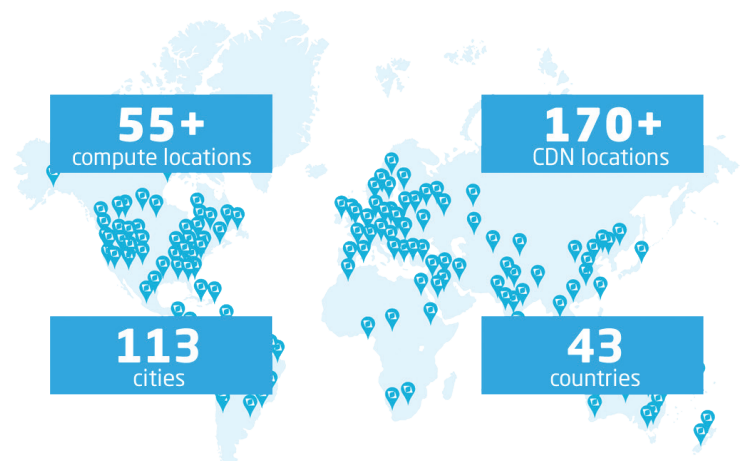

Global reselling

As a VSP you can resell cloud infrastructure from multiple providers, in dozens of countries, through one intuitive control panel. With a huge range of cloud locations, price and performance options available, it's global reselling made easy!

For larger hosts, it's an easy way to add new locations to own your product range.

Powered by the OnApp Federation

As an OnApp Virtual Service Provider, the physical infrastructure you resell comes from the OnApp Federation, our global network of wholesale clouds. There are 55+ compute cloud locations available, and workloads can be migrated between them with ease. Because you don't have to worry about the infrastructure, you can just focus on sales and supporting your clients.

55+ compute locations

170+ CDN locations

113 cities

43 countries

How it works

OnApp for Virtual Service Providers is a 100% hosted global cloud platform that you can use on a pay-as-you-go basis.

Dedicated OnApp control panel

As a VSP you get your own dedicated OnApp control panel - hosted by us, free of charge. You use the control panel to manage locations, users and pricing for your cloud service. Your customers use it to deploy and manage their applications.

On demand locations

Your cloud infrastructure comes from the OnApp Federation, a global network of wholesale clouds. Using your control panel, you browse the locations available, check their performance, uptime and price, and subscribe to as many as you like. The clouds you choose are then available to your customers for application deployment.
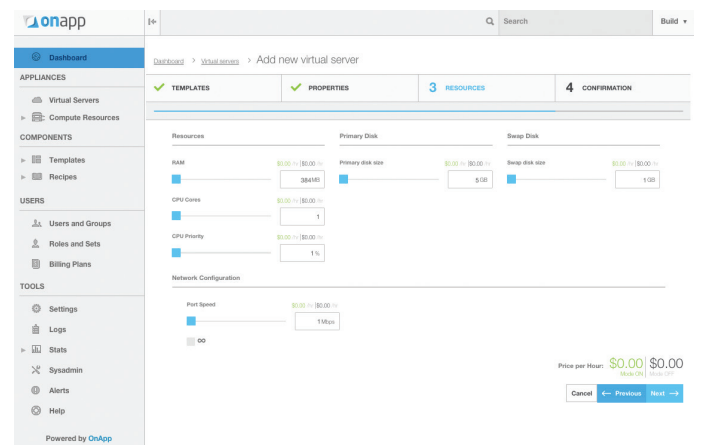

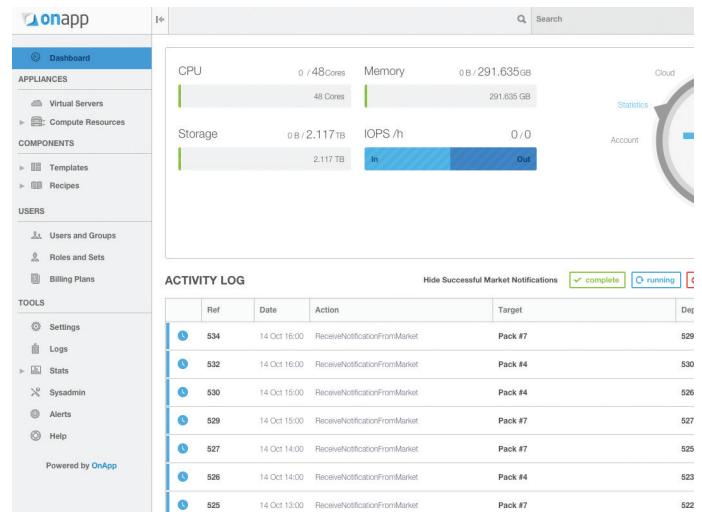

Billing integration and API

OnApp calculates all billing information for your cloud service, and can be integrated with WHMCS for invoicing. OnApp has an open/RESTful API so you can use it with other third party tools as well. If you don't have an existing platform for invoicing, talk to us about getting OnApp with payment processing and helpdesk functions built in.

Simple commercials

As a VSP you have no software licensing costs or hardware costs to worry about. You just deposit funds in your VSP account. When your customers use cloud resources, you pay for them out of your account balance. You can set any retail pricing you like.

24x7 support included

OnApp for Virtual Service Providers includes our legendary 24x7 support service. We support your hosted OnApp control panel and the cloud locations you use; you support your customers.
